Remarks On Colour

Although *Remarks on Colour* is considered difficult on account of its fragmentation, his last work, *On Certainty* (German: *Über Gewissheit*) is considered his most lucid. One resolution of this difficulty is that *Remarks on Colour* is really not fragmentary in nature, but a sustained and identifiable argument against the misleading view that colours are features of places in the visual field.

Remarks on Colour - Wikipedia

The fragmentary nature of *Remarks on Colour* makes it a frustrating read; there are some paragraphs that Wittgenstein repeats almost verbatim 3 or 4 times throughout the text. And towards the end, the use of leading questions ("Isn't it the case that...?") becomes rather grating, like I'm being hurried along to a hazy conclusion.

In Remarks on Colour, phenomenology is at the very least "something mid-way between science and logic", which in my estimation is a reference to the synthetic apriori, though I admit that is a leap. 'Phenomenological analysis' is said to be of a different order than physics, though its not clear whether this is

the same phenomenology that Wittgenstein is warning us against (it is in reference to Goethe's theory of colour).
